Abstract

The homoeopathic mode of treatment often encourages use of drugs at much minimum doses and high potentiating that even the physical existence of a single molecule of the original drug substance becomes theoretically impossible i.e. crosses Avogadro's number. But homoeopathy has sustained for over two hundred years despite periodical challenges thrown by scientists and non-believers regarding its scientificity. There has been a research activities on homoeopathy in recent year, at clinical trials especially at institutional level but very less research work is undertaken at physical, chemical, biological levels with acceptable scientific norms and approach. While undergoing these clinical trials of some homoeopathic drugs that also very negligible work on New Drugs and repeated on all redy existing drugs could be Convincingly shown & one of the greatest objection to this science lies in its inability to explain the modus operand i.e. how homoeopathic cure takes place with these micro doses based on scientific experimentations and proofs. Many aspects of the modus operand still remain unclear. Serious efforts have now been made to understand the molecular mechanism energy theory on the basis of other sciences like physics, Chemistry, and Biology etc. to the potentized form of homoeopathic drugs. In this presentation, an overview of some interesting Scientific works on homoeopathy has state of information presently available of action of the potentized homoeopathic drug.

Scope of Homoeopathy In Acute Appendicitis

Abstract

There is sizable incidence of Acute Appendicitis and Homoeopathy offers an immense scope in specific treatment for such a condition. Persistent attacks of Acute Appendicitis refers to a surgeon for Appendectomy when signs and symptoms are present. Here the physician is needed who is master in framing Totality of Symptoms, because these symptoms of Acute Appendicitis come from the interior to the exterior & hence comes under the domain of Homoeopathic treatment. Here Homoeopathic Principles of Similia & Minimum offers an immense scope to treat the sick individuals to which certain names – Acute Appendicitis – have been falsely applied excluding Principle of Individualization and entitling it as a Surgical Condition and hence referring them as a surgical conditions.

Conclusion :

Along with this recurrent Acute Miasms may require Constitutional Similimum to prevent its development and precipitate to stigmata, the internal dyscrasia which might be result of recurrent Suppressive line of so called Rational Treatment. By Understanding the Acute Appendicitis with its Pathogenesis, Etiology, Anatomy, Clinic all Features and homoeopathic principles, it is crystal clear that Homoeopathy has a immense role in treatment of Acute Appendicitis.

Key-Words:

Simillimum, Surgical, Scope, Physician, Principles, Sick Individual.
